

On the Way to the Chesapeake Bay

The Journey of a Raindrop

The raindrop begins in a cloud high above the Earth. As the cloud gets heavy with raindrops, the drops start to fall.

which carries them right into the Chesapeake Bay

where they journey with
other raindrops to a river,

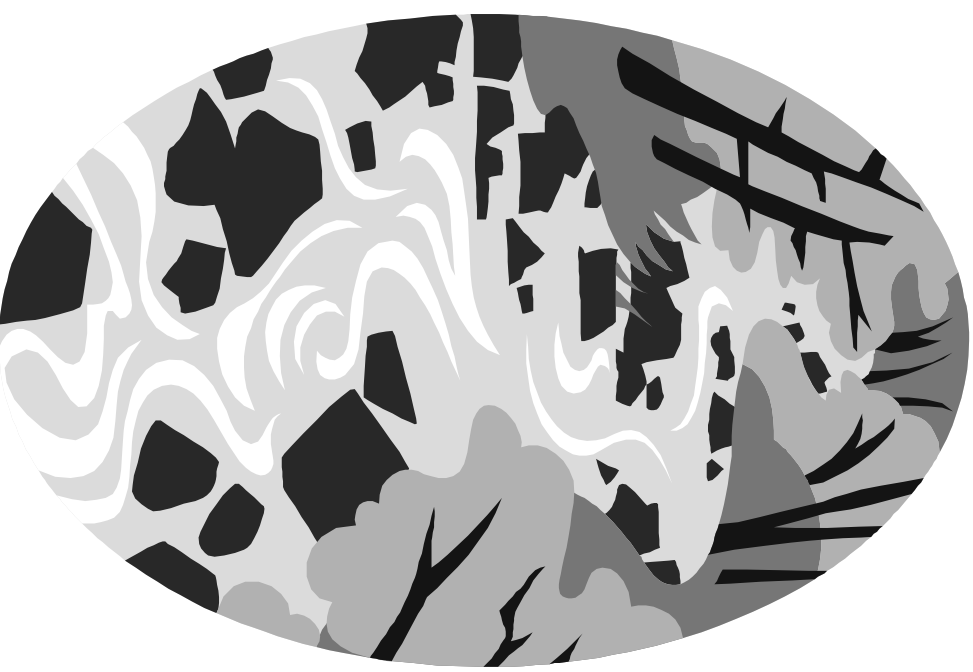

Some of them land on the
roof of my house.

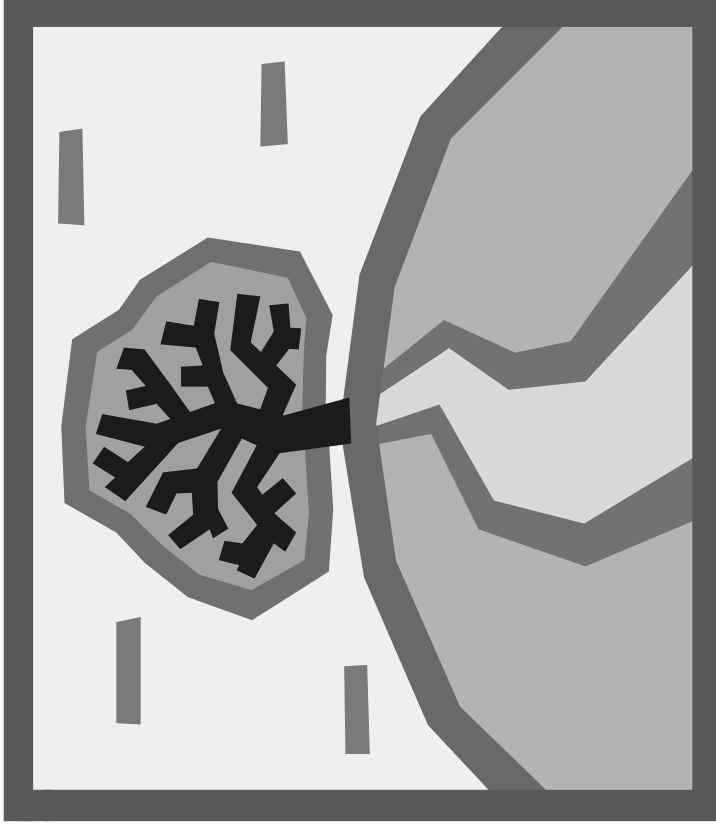

Some land on the grass
in my front yard.

...into a small creek or
stream,

But the journey is not
over. Gravity pulls rain
drops down the hills...

Some land on the farms
in my county.

Some land on the dirt and
the roads.

Some land on the
factories and businesses.
